

Fall Protection Training Service

Prior to the purchase or installation of equipment, it is important to learn more about fall protection. Training on Fall Protection is a process that begins and continues as your use of fall protection equipment becomes a natural addition to safety practices on-site.

Access Compliance recognizes the importance of continued education and training as part of fall protection integration. Regardless of when fall protection fits into your safety plan, Access Compliance has several courses to complete your fall protection knowledge.

1 Hour Basic Fall Protection Class

This One Hour course provides an introduction to fall protection. The topics include: what is fall protection, OSHA regulations/requirements, and an introduction to harness use.

4 Hour Intermediate Fall Protection Class

This intermediate class builds on the 1 Hour class: OSHA regulations/requirements, fall protection and basic harness use. It builds on the basics of fall protection to include the proper selection and use of anchor points, connectors and harnesses.

6 Hour Advanced Fall Protection Class

The advanced class expands the 4 Hour Intermediate class by reviewing what the OSHA regulations require, review of ANSI standards, anchor points and connectors. The Advanced course also includes risk assessment, hazard analysis, and design of fall arrest systems.

8 Hour Specific Train the Trainer

You may want to consider training one of your employees to manage your facility's fall protection training. Access Compliance's Train the Trainer session extensively covers all of the topics contained in the 6 Hour Advanced course and includes: motivation of employees, fall protection programs and inspection.

If you would like a more involved, intensive program beyond the 6 and 8 hour classes listed above, we will work with you to create a tailor made program specific to your company's needs.

Location and Availability

The Training Center at All-Lifts is equipped with the latest fall protection technology of engineered systems and connections, Self-Retracting Lifelines (SRL), and all the equipment needed to have a hands-on fall protection experience.
